Table 2: Weighted convolution class

```
1 import torch
2 import torch.nn as nn
3 import torch.nn.functional as F
4
5 class wConv2d(nn.Module):
6     def __init__(self, in_channels, out_channels, kernel_size,
7                 den, stride=1, padding=1, groups=1, bias=False):
8         super(wConv2d, self).__init__()
9         self.stride = stride
10        self.padding = padding
11        self.kernel_size = kernel_size
12        self.groups = groups
13        self.weight = nn.Parameter(torch.empty(out_channels,
14                                                in_channels // groups, kernel_size, kernel_size))
15        nn.init.kaiming_normal_(self.weight, mode='fan_out',
16                                nonlinearity='relu')
17        self.bias = nn.Parameter(torch.zeros(out_channels)) if
18                                bias else None
19
20        device = torch.device('cpu')
21        self.register_buffer('alfa', torch.cat([
22            torch.tensor(den, device=device),
23            torch.tensor([1.0], device=device),
24            torch.flip(torch.tensor(den, device=device), dims
25                               =[0])
26        ]))
27        self.register_buffer('Phi', torch.outer(self.alfa, self.
28                                                alfa))
29
30    def forward(self, x):
31        Phi = self.Phi.to(x.device)
32        weight_Phi = self.weight * Phi
33        return F.conv2d(x, weight_Phi, bias=self.bias, stride=
34                        self.stride, padding=self.padding, groups=self.groups)
```

论文题目: Optimal Weighted Convolution for Classification and Denoising

中文题目: 最优加权卷积用于分类与去噪

论文链接: <https://arxiv.org/pdf/2505.24558>

所属单位: 意大利国家研究委员会-应用数学与信息技术研究所

核心速览：本文提出一种加权卷积算子，通过引入空间密度函数改进传统卷积神经网络，在分类和去噪任务中显著提升性能。
